

This document presents a professional product overview including brand details, availability, specifications, and descriptive information for reference, sales support, and catalog-style distribution.

Product Overview

Reed R2990 Thermocouple Adapter

Manufacturer: Reed Instruments

Model: MEA-REE-01746

Availability: In Stock

Description

The R2990 is a simple black K-Type adapter that converts a standard mini-connector thermocouple probe into dual shrouded banana-plug inputs, letting it plug into REED multimeters and clamp meters equipped with contact-temperature measurement. It has no sensor of its own -- accuracy and range depend entirely on whichever Type K probe is attached to it. It's a low-cost way to extend an existing meter's compatibility with REED's broader probe lineup.
