Reed CM-8822 Thickness Gauge, Coating, 1000um

Professional detailed product specification sheet

This document presents a professional product overview including brand details, availability, specifications, and descriptive information for reference, sales support, and catalog-style distribution.

Product Overview

Reed CM-8822 Thickness Gauge, Coating, 1000um

Manufacturer: Reed Instruments

Model: MEA-REE-03001

Availability: In Stock

Description

Handheld coating thickness gauge that checks the thickness of non-magnetic coatings -- such as paint, powder coat or plating -- on both magnetic and non-magnetic metal substrates, covering a 0-1000 micron range. It recognizes the connected probe automatically, supports quick field zeroing, and switches between micron and mil units on its large LCD. The set includes both a ferrous and a non-ferrous probe along with calibration standards, so one unit covers steel as well as aluminum, brass and similar bases.
